**Annex of the Country Assistance Policy**

**Rolling Plan for Grenada**

As of April 2020

### Basic Policy of Assistance

#### Overcoming Vulnerability (common to all CARICOM Member Countries)

#### Priority Area 1

**Environment and Disaster Risk Management**

**Background and current situation**
As Grenada is a Small Island State, the damage from flooding and landslides caused by hurricanes is severe and affects the development of agriculture and tourism, which are the country’s main industries. It is important to overcome this vulnerability to natural disasters, including Climate Change. In the area of solid waste management, although the Government of Grenada is utilizing the 3Rs (Reduce, Reuse, and Recycle), there are still challenges in increasing the level of involvement of civil society and private companies, and the operation and management of final waste disposal. Increasing the ratio of renewable energy in the country’s energy mix and promoting energy efficiency are also required given the country’s reliance on imported fuel for energy production.

**Strategy**
The capacity of the Disaster Risk Management Sector to cope with natural disasters such as frequent hurricanes and flooding will be strengthened while disseminating the outcomes of, and lessons learned from past Japanese cooperation to other areas in the country. To cope with Climate Change, both adaptation and mitigation measures will be encouraged. With regard to waste management in the Environment sector, the participation of civil society and private companies in the 3Rs will be promoted, and improvement in the operation and management of final waste disposal sites will be targeted. It is expected that these measures will lead to overcoming vulnerabilities particular to Small Island Developing States.

Sharing expertise and experience and promoting synergy among neighboring island countries with similar problems will be taken into account while extending development assistance.

#### Development Issue

**Improvement in Environment and Disaster Risk Management**

#### Priority Area 2

**Fisheries**

**Background and current situation**
The Government of Grenada places a high priority on expanding tourism and fisheries as major national industries. In particular, fisheries, which consists almost entirely of small coastal fishing (artisanal fishing), plays an important role in Grenada’s national primary industry.

**Strategy**
The sustainable development of fisheries will be assisted by promoting the effective use of facilities constructed by past Japanese Grant Aid for Fisheries. Sharing expertise and experience and promoting synergy among neighboring island countries with similar problems will be taken into account while extending this assistance.
